

Weekly Meeting Sprint 4 - Week 18 (lv. 6)

Scrum Master: William Nordgren

Secretary: Jakob Persson

Customer Value and Scope

- the success criteria for the team in terms of what you want to achieve within the project (this can include the application, but also your learning outcomes, your teamwork, or your effort)

Learning to work properly with Scrum when developing an application, in greater detail that means applying the theory to our group, and adapting it to fit our needs so we can work with Scrum in a way that fits our group. Furthermore we want to practice working with individuals from different backgrounds with different interests and education and still produce high quality code whilst making sure everyone in the group is doing well in terms of mental wellbeing.

In terms of the actual application, we want to provide as much as possible within a given timeframe that the product owner asks for, and spend the time implementing features that add value for the product owner.

Design decisions and product structure

- how you ensure code quality and enforce coding standards

Before we actually started writing code, we as a group agreed with a few guidelines to follow whilst writing code, and that we make use of comments when we feel they are needed as we think the code is more readable without crowding the window with comments that explain a getter or setter for example. However for longer, more complicated methods we do make use of comments to explain what it does. We enforce these standards simply by peer review, the size of the project lets us review the code we have written every week, typically on Fridays, and make sure these conventions are followed.

Application of Scrum

- the sprint review and how it relates to your scope and customer value (Did you have a PO, if yes, who?, if no, how did you carry out the review? Did the review result in a re-prioritisation of user stories? How did the reviews relate to your DoD? Did the feedback change your way of working?)

We shipped the most recent version of the application to our product owner, Vidar Magnusson for review. This version includes all features that we were able to mark as done, according to our DoD. We presented our user stories to the PO and asked what he would like for us to focus on, what is the most important to him and based on his thoughts we re-prioritised the user stories for the next sprint. Our DoD matches with the PO's definition of done since both parties agreed that the features weren't missing anything.

Sprint 5 planning

At the moment we have some bugs but they are not as big as those we had last week. We also managed to deliver more than we committed to this week and therefore we think we can handle those and at the same time increase the velocity.

We will plan sprint 5 on Monday instead of today (Friday), since we have discussed and decided that it is better to start clean each week.
