- What do I want to learn or understand better?

I want to get better at writing c# code, and in the user stories we have taken on I am able to get better at this. There has also been some struggle with Git and using Git more smoothly is also something I would like to get better at. Luckily we have very helpful people in the group who have been able to help out with Git.

- how can I help someone else, or the entire team, to learn something new?

I am working together with Gabriel and we are learning from each other all the time when working together by sharing our ideas and suggestions on how to complete the user stories that we have taken on together.

- what is my contribution towards the team's use of Scrum?

I try to make sure we follow the Scrum framework and am contributing the best I can in for example taking on user stories, doing estimation for the stories and reviewing/planning our work by part-taking in meetings.

- what is my contribution towards the team's deliveries?

Me and Gabriel have been doing our best to deliver the user stories we've taken on in order to deliver value for our product owner.
